Esercizio 1

1) Grammatica LL(1), FIRST e FOLLOW

La grammatica LL(1) da noi definita equivalente alla grammatica L data è la seguente:

$L \rightarrow N M$
 $M \rightarrow ++L \mid \varepsilon$
 $N \rightarrow [O \mid E:N$
 $O \rightarrow] \mid E P$
 $P \rightarrow , LL \mid ..E]$
 $LL \rightarrow] \mid E,LL$
 $E \rightarrow id \mid num$

$FIRST(L) = FIRST(N) = \{ [, id, num \}$
 $FIRST(M) = \{ ++, \varepsilon \}$
 $FIRST(O) = FIRST(LL) = \{], id, num \}$
 $FIRST(P) = \{ , , .. \}$ (la virgola in rosso è un token della grammatica)
 $FIRST(E) = \{ id, num \}$

$FOLLOW(L) = FOLLOW(M) = \{ \$ \}$
 $FOLLOW(N) = FOLLOW(O) = FOLLOW(P) = FOLLOW(LL) = \{ ++, \$ \}$
 $FOLLOW(E) = \{ :, .., , ,] \}$

Errori:

- per gli errori e1 ed e16 abbiamo scelto arbitrariamente di inserire un id, sarebbe stato possibile inserire un num
- nell'esecuzione del parsing sull'input dato abbiamo usato la convenzione (spiegata nel libro di testo, capitolo 4.5.5) di effettuare un pop sullo stack nel caso che il token al top of stack non corrisponda al simbolo in input, dare il messaggio che il terminale al top of stack è stato inserito e poi riprendere il parsing
- gli errori che cominciano con s sono stati ricavati tramite l'uso del synchronizing set

Il testo degli errori e le azioni da loro effettuate sono gli stessi della tabella di parsing SLR.

La tabella è identica alla tabella di parsing SLR, fatta eccezione per gli errori segnati in grassetto: nel parser SLR alcuni dei potenziali errori generati dalla presenza di rel e pred erano stati rimandati, in questo caso si è scelto di gestirli subito, evitando di delegarli.

9) Esecuzione dell'input (LALR)

N.B Per questo input l'esecuzione del parsing LALR ha dato gli stessi risultati dell'esecuzione del parsing SLR.
